

DISCLAIMER
 Flood extents/depths shown on this map were determined based on Flood Insurance Study model, CH2M hydraulic models (Steele Branch, Airport Tributary, Hart Creek, and Driftwood River LOMR), and USGS modeling (East Fork White River and Flatrock River Flood Map Foundation Libraries). These models assume that flow paths and bridge openings remain unobstructed and do not fail. Average or standardized rainfall amounts and distributions are also assumed. Because these models cannot take every localized feature and all possible rainfall distributions into account, estimated flood elevations may be slightly different than actual flood elevations. In addition, the flood extents and depths were based on available LIDAR data for topography. While this data is much more accurate than previous large scale mapping efforts, elevations may be up to a foot too high or too low with most locations' elevations being within a half of a foot. In addition, the topographic information does not show features, such as back flow prevention devices, that may keep areas shown as flooded on the map flood free for this frequency flood.
 Therefore, the information on this map provides a guide for flood light decisions but must be combined with actual observations for additional guidance.
 Additional flood impacts and overtopped roads are not shown but may occur
 - in areas where flood depth mapping was not developed as part of this Plan, or
 - on minor roads such as private drives or unimproved roads.
